Safe Harbor and Disclaimers

PURCHASING DECISIONS: GA FUNCTIONALITY ONLY

Other than statements of historical fact, all statements contained in these materials and any accompanying oral commentary (collectively, the “Materials”) are forward-looking statements within the meaning of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended, including statements regarding (i) Snowflake’s business strategy, plans, opportunities, or priorities; (ii) Snowflake’s new or enhanced products, services, and technology offerings, including those that are under development or not generally available; (iii) market size and growth, trends, and competitive considerations; (iv) Snowflake’s vision, strategy, and expected benefits relating to artificial intelligence (“AI”), Snowpark, Snowflake Marketplace, the AI Data Cloud, and AI Data Clouds for specific industries or product categories, including the expected benefits and network effects of the AI Data Cloud; and (v) the integration, interoperability, and availability of Snowflake’s products, services, or technology offerings with or on third-party platforms or products, including public cloud platforms. These forward-looking statements are subject to a number of known and unknown risks, uncertainties, and assumptions, including those described under the heading “Risk Factors” and elsewhere in the Annual Reports on Form 10-K and the Quarterly Reports on Form 10-Q that Snowflake files with the Securities and Exchange Commission from time to time. In light of these risks, uncertainties, and assumptions, the future events and trends discussed in the Materials may not occur, and actual results could differ materially and adversely from those expressed or implied in the forward-looking statements. As a result, you should not rely on any forwarding-looking statements as predictions of future events. Forward-looking statements speak only as of the date the statements are first made and are based on information available to Snowflake at the time those statements are made and/or management’s good faith belief as of that time. Except as required by law, we undertake no obligation, and do not intend, to update the forward-looking statements in these Materials.

Any future product or roadmap information (collectively, the “Roadmap”) is intended to outline general product direction. The Roadmap is not a commitment, promise, or legal obligation for Snowflake to deliver any future products, features, or functionality; and is not intended to be, and shall not be deemed to be, incorporated into any contract. The actual timing of any product, feature, or functionality that is ultimately made available may be different from what is presented in the Roadmap. The Roadmap information should not be used when making a purchasing decision. In case of conflict between the information contained in the Materials and official Snowflake documentation, official Snowflake documentation should take precedence over these Materials. Further, note that Snowflake has made no determination as to whether separate fees will be charged for any future products, features, and/or functionality which may ultimately be made available. Snowflake may, in its own discretion, choose to charge separate fees for the delivery of any future products, features, and/or functionality which are ultimately made available.

The Materials may contain information provided by third-parties. Snowflake has not independently verified this information, and usage of this information does not mean or imply that Snowflake has adopted this information as its own or independently verified its accuracy.

AGENDA

- Cortex AI Functions
- Your First AI Use Case
- Snowflake CoWork
- Snowflake CoCo

01

CORTEX AI FUNCTIONS

THE PROBLEM: AI FEELS OUT OF REACH

Teams assume AI on their data needs a whole new stack.

- The usual assumption: a data science team, a GPU cluster, months of training.
- That perceived cost can keep practical text use cases off the roadmap.
- Cortex AI functions expose managed capabilities through familiar SQL.

THREE FUNCTIONS, PLAIN SQL

Managed text analytics, called directly from SQL.

SUMMARIZE

Returns a generated summary of English text.

SENTIMENT

Returns a -1.0 to 1.0 polarity and certainty score.

AI_TRANSLATE

Translates text between supported languages.

COMPOSE LIKE ANY FUNCTION

Scalar functions, so the SQL patterns are ones you know.

Combine all three in a single SELECT over every row.

Chain them in a CTE, or apply row-by-row — same as any function.

Use familiar SQL against your existing text columns.

CORTEX AI FUNCTIONS

Text in. Generated values out. Inspect before acting.

SUMMARIZE

A generated summary to review

SENTIMENT

Polarity and certainty: -1.0 to 1.0

AI_TRANSLATE

Supported-language inputs to English

02

YOUR FIRST AI USE CASE

FROM RAW FEEDBACK TO REVIEW

A sentiment-based review queue, not an urgency classifier.

THE PROBLEM

Thousands of raw feedback rows, and too little time to review them.

THE PIPELINE

AI_TRANSLATE handles supported non-English rows before SUMMARIZE + SENTIMENT load the insights table.

WHAT EACH ROW GETS

Validate the score and follow-up rule before acting.

A generated summary and a numeric sentiment score.

A POSITIVE / NEUTRAL / NEGATIVE label plus a needs_followup flag.

WHERE needs_followup = TRUE produces the review queue.

FROM RAW FEEDBACK TO A REVIEW QUEUE

One INSERT...SELECT normalizes and enriches the sample rows.

03

SNOWFLAKE COWORK

ASK IN PLAIN ENGLISH

The exploration layer on top of your enriched data.

USERS ASK NATURALLY

Authorized users can ask questions and receive charts or tables without writing SQL.

GROUNDING ON YOUR DATA

For structured data, a Cortex Agent can use Cortex Analyst to query your data, under the user's permitted access and governance policies.

A SEMANTIC VIEW IS A KEY INVESTMENT

A reusable business definition over governed data.

Model `FEEDBACK_INSIGHTS_TABLE` in a semantic view.

Define what `sentiment_score`, `sentiment_label`, and `needs_followup` mean.

Configure the agent and access; evaluate representative questions.

ASK IN PLAIN ENGLISH

For structured data, an agent can use Cortex Analyst and a semantic view.

Configure agent and tool access; evaluate answers. Applicable data policies still apply.

04

SNOWFLAKE COCO

YOUR AI CODING ASSISTANT

It uses context appropriate to each development surface.

THE FRICTION

Every new workload means signature lookups, error decoding, and doc hunting.

SNOWFLAKE-AWARE CONTEXT

CoCo in Snowsight can use the active workspace and objects you add. Desktop and CLI add local development context.

THREE SURFACES

Choose a surface whose prerequisites fit your environment.

Snowflake CoCo in Snowsight, integrated with Workspaces.

Snowflake CoCo Desktop, a generally available desktop IDE.

The Snowflake CoCo CLI for local terminal development.

ONE ASSISTANT, THREE SURFACES

Context and prerequisites vary by surface.

RECAP: FOUR WAYS TO PUT AI TO WORK

From managed SQL functions to conversational and coding experiences.

Cortex AI functions run text analysis as scalar SQL.

The use case exercise gives you a reusable enrichment pipeline.

CoWork supports governed exploration; Snowflake CoCo assists development.

THANK YOU

FROM RAW FEEDBACK TO TRIAGE

One INSERT...SELECT normalizes and enriches the sample rows.

THE PROBLEM

Thousands of raw feedback rows, and too little time to review them.

THE PIPELINE

AI_TRANSLATE handles supported non-English rows before SUMMARIZE + SENTIMENT load the insights table.
